AUTHOR INDEX

References are to review numbers; an Errata section may be found at the end of this Index. Russian authors are listed under the transliterated spelling of Russian used by Mathematical Reviews (see table at the end of this issue). Surnames consisting of more than one part (e.g., de Barra, van Lint, etc.) are listed under the first capital letter. Items without indicated authors are usually listed separately in the Key Index, which follows the Author Index. Collections of papers for which an editor (or editors) is named are referred to under the editor's name. They are also listed in the Key Index. A star (*) before a title indicates that the item is a book, while a dagger (†) indicates that reference is made to the item in the Errata section.

Reviews of articles in a collection are now indexed both by the names of the authors and, in the Key Index, by an appropriate title, which is explicitly mentioned at the end of the review of the collection as a whole; by scanning successive indexes for that title the reader can trace the reviews of all the articles in a given collection. The review of an article in a collection now ends with a reference to the review of the collection as a whole. If the review of a collection as a whole includes the table of contents of the collection than any article that is not reviewed individually will usually be indexed by the names of the authors, with a reference to the review containing the table of contents.
